

Employee Underpayment Assessment - Executive Summary

Prepared by KordaMentha | Litigation Support & Forensic Accounting

TOTAL ESTIMATED UNDERPAYMENT LIABILITY

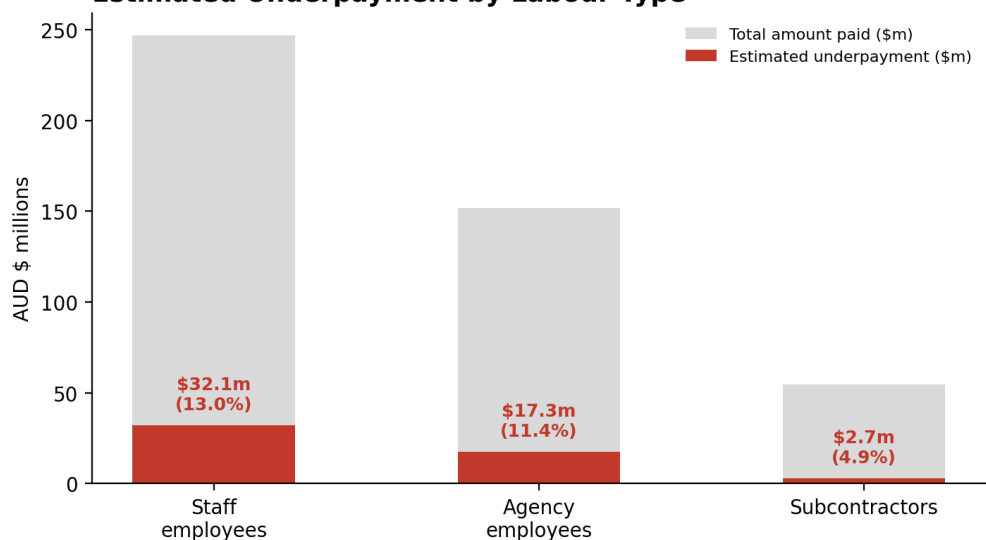

\$52.09 million

≈ 11.5% of the \$453.36m in wages paid across 1,048 employees, contractors, and agency staff (2011–2015)

Breakdown by labour type

Labour type	Headcount	Total paid	Est. underpayment	% of pay
Staff employees	666	\$247.01m	\$32.10m	13.0%
Agency employees	388	\$151.59m	\$17.33m	11.4%
Subcontractors	364	\$54.77m	\$2.67m	4.9%
Total	1,048	\$453.36m	\$52.09m	11.5%

Estimated Underpayment by Labour Type

Key takeaways

- Directly-employed staff carry the largest exposure in dollar terms (\$32.1m) and the highest underpayment rate (13.0%) — this group should be prioritised for remediation and back-payment.
- Agency employees represent a materially lower but still significant exposure (\$17.3m, 11.4% of pay) — Luxuri may wish to review its labour-hire agreements for cost recovery.
- Subcontractors show the lowest rate of underpayment (4.9%), consistent with subcontractors being paid regular-hours rates only under the current award/agreement structure.
- This figure is based on payroll data that has been cleansed of known data-entry errors (mislabelled pay fields, corrupted dates); underlying transactional detail and the cleansing methodology are available in the supporting workpapers on request.
